DETAILED ACTION

Allowable Subject Matter

1. Claims 27-29 allowed.
2. Claim 26 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claim 25 and rejected under 35 U.S.C. 103(a) as being unpatentable over Heo (5,908,317) in view of Hashimoto (6,475,896).

Regarding Claim 1, Heo discloses a method of forming chip bumps of bump chip scale semiconductor package where a method of forming chip bumps of a bump chip scale semiconductor package, such a package and a chip bump are disclosed. The chip bumps are directly formed on the chip pads of a semiconductor chip. The chip bumps are used as the signal input and output terminals of the package and are used as surface mounting joints when the chip is mounted to a mother board. Heo fails to disclose the required removal/exposure of the top face of the bump. However, Hashimoto discloses electronic component and semiconductor device, method of making the same and method of mounting the same, circuit board, and

electronic instrument where the required removal/exposure of the top face of the bump is disclosed.

It would have been obvious to one of having ordinary skill in the art at the time the invention was made to include the required removal/exposure of the top face of the bump in Heo as taught by Hashimoto in order to have a semiconductor package structure with higher performance.
